**Klüber Lubrication Introduces New Synthetic,  
High-Temperature H1 Chain Oil**

*Synthetic Oil Meets Demands of Food-Processing Industry*

Londonderry, NH (August 29, 2007) – Klüber Lubrication delivers the newest technology in synthetic, high-temperature chain oils to the food-processing industry with the introduction of Klüberfood® NH1 CH 2-220.

Klüberfood® NH1 CH 2-220 is a NSF H1-registered, synthetic high-temperature lubricating oil specifically designed to withstand the extreme application parameters of chains in baking ovens. It offers improved wear protection resulting in extended chain life, and reduced oil consumption when exposed to high temperatures.

Klüber Lubrication's Food Industry Group Manager, David Laing, states, "Our customers not only appreciate an improvement of the working environment with no smoke, they also report up to 50% reduction of oil consumption as well as a reduction of their operating costs. And they confirm that Klüberfood® NH1 CH 2-220 shows low residue formation, which means cleaner chains. Finally, they value the increase in food safety they gain with the new NSF H1-registered chain oil."

For more information about the Klüberfood® NH1 CH 2-220, including evaporation and chain elongation test data, or to learn more about Klüber, visit the company's website at [www.kluber.com](http://www.kluber.com).

More information will also be available at the Klüber booth (#1440) at the upcoming International
